78. **NUMERICAL CONTROL PROGRAMMER**

Plans numerical control program to control contour-path machining of parts on automatic machine tools. Computer Numerical Control (CNC) machines include, but are not limited to, machining tools such as lathes, multi-axis spindles, and milling machines, but the functions formerly performed by human operators are performed by a computer-control module. CNC machines cut away material from a solid block of metal, plastic, glass, or other materials to form a finished part. Applies knowledge of the working properties of materials with CNC programming knowledge to design and carry out the operations needed to make machined products that meet precise specifications. Most companies require previous experience as a machinist or machine setter, operator, and tender along with apprenticeship programs, informally on the job, or training in secondary, vocational, or technical college. Requires knowledge of computers and electronics, computer numerical control, basics of programming, and computer-aided manufacturing.
